5.	Pragnesh Vagadiya	220573107018

Prof. Munindra Lunagaria
(Faculty Guide)

Dr. Krunal Vaghela
(Head of the Department)

Academic
year (2023)

CANDIDATE'S DECLARATION

We hereby declare that the work presented in this project entitled “**Operating System**” submitted towards completion of project in **Fourth Semester** of B.E. (Computer) is an authentic record of our original work carried out under the guidance of “**Prof. Munindra Lunagaria**”.

We have not submitted the matter embodied in this project for the award of any other degree.

Semester: 4th

Place: Rajkot

Signature:

Yash Idhatiya (210570107007)

Harmi Sangani (210570107053)

Piyush Solanki (210570107088)

Jainam Parmar (210570107118)

Pragnesh Vagadiya (220573107018)

**MARWADI EDUCATION FOUNDATION,
FACULTY OF ENGINEERING,
RAJKOT**

CERTIFICATE

Date:

This is to certify that the “**Operating System**” has been carried out by **Yash Idhatiya** under my guidance in fulfillment of the subject Design Engineering-1B in COMPUTER ENGINEERING (4thSemester) of Gujarat Technological University, Ahmedabad during the academic year 2023.

Sign of Faculty Guide
Prof. Munindra Lunagaria

HOD, CE Department

ACKNOWLEDGEMENT

We have taken many efforts in this project. However, it would not have been possible without the kind support and help of many individuals and organizations. We would like to extend our sincere thanks to all of them.

We are highly indebted to **Prof. Munindra Lunagaria** for their guidance and constant supervision as well as for providing necessary information regarding the Design Engineering Project Titled “**Operating System**”. We would like to express our gratitude towards our Head of the Department **Prof. Kunal Vaghela** and other staff members of Computer Engineering Department, **Marwadi Education and Foundation** for their kind co- operation and encouragement which helped us in completion of this project.

We even thank and appreciate to our colleague in developing the project and people who have willingly helped us out with their abilities

Yash Idhatiya
Harmi Sangani
Piyush Solanki

Pragnesh Vagadiya

ABSTRACT

A computer system consists of many resources like hardware and software, which are useful to complete a task. The common required resources are input/ output devices, memory, file storage space, CPU etc. The operating system acts as a manager for all the above resources and allocates them to specific programs and users, whenever necessary to perform a particular task. An operating system is the interface between the user and the machine. Here our main goal is finding the new ideas for involving existing computer operating systems.

CHAPTER 1: INTRODUCTION

Problem summary

We all use many operating in many system-like computers, laptop, mobile phone, etc. But it has many issues or features that can be improve. In some computer operating system major problem is taken more booting time, not efficient memory or space management. So, here try solve that problem by improving some of its functionalities.

Aim

The main aim of our project is to have some of solve some errors or problem in operating system so its performance can improve.

CHAPTER 2: DESIGN THINKING PHASE

2.1

AEIOU CANVAS

ACTIVITIES:

- Process management
- User interface management
- Memory management
- File management

ENVIRONMENT

- Physical operating system
- Virtual operating system
- Emulator like VMware, virtual box

INTERACTIONS:

- Operating system is abstract layer between hardware and software component.
- Command line interface (CLI)
- Graphical user interface

OBJECT:

- Users
- Applications
- Hardware drivers

USERS:

- End users like, students
- Faculties
- Admin
- Employee
- Manager

2.2

EMPATHY CANVAS

Empathy means the experience of understanding another person's condition from their perspective. From Empathy Mapping canvas we discovered and learned about the emotional aspect of our users. Empathy is the foundation of any human design process. The Empathy Mapping is comprised of Users, Stakeholders, Activities and Some Happy & Sad moments.

USERS:

- Students, Faculties, Manager

STAKEHOLDERS:

- Developers
- System Administrators
- Computer Manufactures

ACTIVITIES:

- Memory management
- Process Management
- File management
- Device management
- System call handling

STORY BOARDING

- **Happy Story:** A Programmer want to create a software for computer but he needs to create it for all different kernel system but in our operating system he need to develop it from only from one because our os provide central kernel system .
- **Happy Story:** A disable person want operate all his homemade appliances with voice control so with that our new embedded operating system he can easily do this because it is central platform independent os.

- **Sad Story:** A programmer want to create a software for computer but he uses online payment system for money issues with OS of all various devices because he need to create for all OS because there are not platform independent.

2.3

Problem definition by Prior Art Search

- An operating system project involves researching and researching and analyzing exiting technology or techniques that may be relevant to the problem or solution that the project aims to address. this involves looking at the existing operating system and related project to see if any of them have solutions similar to what the project aims to create, assessing their strengths and weaknesses, and identifying opportunities for improvement or innovation.

2.4

Ideation Canvas

This Canvas Consist of The Idea Behind the User, So in This Canvas Some Brief Ideas Are Express Which Are Express In Empathy Canvas. People Section Consist of Persons Related to User Technically and Similar Persons May Related to User. Then We Divided Activities in Social & Technical and Try To Find Out The Importance Of Each Activity And Situations& Location Regarding Are Find Out Related To Each.

PEOPLE:

- ☐ Developer
- ☐ Admin
- ☐ UI Designer
- ☐ END users

ACTIVITIES:

- ☐ Error detection
- ☐ Memory management
- ☐ I/O management

SITUATION/CONTEXT/LOCATION:

- Personal computer
- Office

PROPS/PROBLEM SOLUTION:

- For central Kernal system
- Better recourse management
- Improve booting system
- Good network system

2.5

Product Development Canvas

PURPOSE:

- ☐ Managing system resources, providing system mechanism, provide user interface

PEOPLE:

- ☐ End users
- ☐ Developer
- ☐ UI designer

PRODUCT EXPERIENCE:

- ☐ Easy to operate, familiar UI, customizable

PRODUCT FUNCTIONS:

- ☐ File management
- ☐ Networking
- ☐ User interface
- ☐ Device management

PRODUCT FEATURES:

- ☐ Centre kernel
- ☐ High accuracy
- ☐ Multi-tasking

PRODUCT COMPONENTS:

- ☐ Kernal
- ☐ Shell
- ☐ Virtual memory manager

CUSTOMER REVALIDATION:

- ☐ Easy to use
- ☐ Multiplatform
- ☐ Good device combability

REJECT, REDESIGN, RETAIN:

- Poor task scheduling
- High maintenance
- Poor update system
- Complex for developing

CHAPTER 3: FEEDBACK ANALYSIS WITH USER

Interaction-1

- **User-feedback:** It was taken high memory blocks in main memory.
- **Our implementation:** We optimized the memory uses in such a way; it'll take less space in main memory.

Interaction-2

- **User-feedback:** The language being used is not understandable for every person.
- **Our implementation:** We will provide the content in multiple common and understandable languages.

CHAPTER 4: REFERENCES

- Microsoft Window Operating System
- Linux Kernal System
- Open Source Kernal Distributions

CHAPTER 5: APPENDIX – B

The screenshot displays a Linux desktop environment. On the left, a window titled "Operating System Updates" shows 17 components with updates available, totaling 120.7 MB. The updates list includes packages like command-not-found, gir1.2-javascriptcoregtk-4.0, google-chrome-stable, libprint-c2-async, libjavascriptcoregtk-4.0-1b, libqt5core5a, libqt5dbus5, libqt5gui5, libqt5network5, libqt5widgets5, libwebkit2gtk-4.0-3t, openssl-client, python3-commandnotfound, qts-gtk-platformtheme, and org.chromium.Chromium. On the right, a terminal window shows the output of the 'neofetch' command, displaying system information such as OS (Pop!_OS 20.04 LTS x86_64), Host (Alienware 14 A10), Kernel (5.15.8-76051508-generic), Uptime (3 days, 3 hours, 48 mins), Packages (2097 (dpkg), 11 (flatpak)), Shell (bash 5.0.17), Resolutions (1920x1080), DE (GNOME), WM (Mutter), WM Theme (Pop), Theme (Pop-dark [GTK2/3]), Icons (Pop [GTK2/3]), and Terminal (x-terminal-emul). Below the terminal, a system monitor window shows CPU, MEM, SWAP, and NETWORK usage, along with a list of running processes.

The screenshot displays a Bodhi Linux desktop environment. The background is a green and black pattern with the word "bodhi" in large green letters. A terminal window shows the output of the 'cat /etc/passwd' command, displaying user information for ylee. A file manager window is open, showing the contents of the /home/ylee directory, including Desktop, Documents, Downloads, Music, Pictures, Public, Templates, and Videos. On the right, a window titled "Bodhi Basics" provides information about Bodhi Linux, including its philosophy and system updates. The window contains the following text: "Bodhi is a lightweight Linux distribution that uses the Moksha window manager. Our philosophy is to provide a minimal base system. Users can install any additional software they want. You will need an internet connection established to do system updates or install software in Bodhi. Please follow this link if you need assistance: Connecting to the internet. System updates are important from a security perspective. The preferred way to perform system updates is to open a terminal and run the command: sudo apt update && sudo apt dist-upgrade".
